Office Action Summary

Art Unit: 1711

### DETAILED ACTION

1. Claims 1-12 are under examination.
2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1, 4 and 12 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 is indefinite in reciting "finely divided" (lines 1 and 3) "unconsolidated sheet like structures" (lines 2 and 6) and "temperatures above 120°C" (line 5) since it is not clear how fine is finely divided?, what is an unconsolidated sheet like structure and what is the upper limit of

*WLF* temperature. This claim is further vague since it requires <sup>X</sup>to be OH or NH<sub>2</sub> if Y is hydrogen; but

Y is never hydrogen. Similarly X is never hydrogen. Meaning of sentence "X and Y are together

*WLF* a <sup>π</sup> "bond" is also not understood. (Examiner assumes that X and &Y may be meant to be connected by a double bond).

*WLF* Similar remarks apply to <sup>claims</sup>~~claims~~ 4 and 12.

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 1711

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103© and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

4. Claims 1-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Dotzauer et al (CA 2037214)

(Dotzauer is of record on PTO-1449, paper no. 3).

Dotzauer discloses boards made out of a composition comprising finely divided materials, high molecular weight polycarboxylic acids, polyhydric alcohols and alkanolamines or polyamines (p. 1, lines 28-33). Suitable finely divided materials are described on p. 1, lines 34-37. Composition is molded to form sheets under heat and pressure (p. 4, line 17 to p. 5, line 31). Patentee discloses amides on p. 3, line 11.

It would therefore have been obvious to follow teachings of Dotzauer and arrive at instantly claimed invention.

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

Art Unit: 1711

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 1-12 are rejected under 35 U.S.C. 102(b) as being anticipated by Dotzauer et al (CA2037214).

Disclosure of Dotzauer presented in brief earlier, shows that 1-12 lack novelty.
